CORE CLOUD INFRASTRUCTURE ARCHITECTURE

Engineering Technical Documentation - Distributed Platform Guild.

1. TOPOLOGY OVERVIEW
Our distributed Kubernetes clusters operate across three multi-region availability zones (us-east-1, eu-west-1, ap-south-1).
Workload balancing is managed via Cilium eBPF service meshes with wireguard-level encryption.

2. SERVICE MESH SECURITY & CANARY AUTH
The internal service mesh mutual TLS authentication token is ENG-INTERNAL-4491.
Database read replicas are provisioned with automated failover routing with sub-second health probes.
All ingress traffic terminates at Envoy edge proxies enforcing mTLS certificate validation.
